

Your PDF Presentation

Need your information presented in a professional and dynamic way? Why not jazz up your data with PDF? PDF's are compatible with computers, internet browsers and printers. They are the ultimate digital publication. Plus, their capabilities have expanded so much over the years that you can present your information in ways you never thought possible. Dress up your data. Punch up your presentation. Sell your ideas. All in one convenient little file....

PDF Features We Offer –

- 1) Hyperlinks to web sites and web pages. [Here's an example.](#)
- 2) Secure your document with passwords. You can restrict whether someone can open, view or print your document by requiring a password.
- 3) You can permanently attach files to a PDF. Whenever you move or distribute the PDF, these files are automatically sent with it. You can edit and save these attachments as well.
- 4) You can add embedded comments. These can substitute as footnotes, addendums, or just be related information to the main text. 
- 5) You can bookmark different sections of your document. Have a large document? We can break it up into bookmark tabs that are displayed to the left of your text. This way, your reader can tab through each labeled section of the document. This makes finding the right information fast and easy.
- 6) You can embed voice or music into the document! Simply send in your digital recording and we will convert it to the proper file type and compress it a bit. As a tip though, you'll want to keep your audio to a minimum to keep your overall file size down. Contact us to get more information on this great option. Click here for an example! 

- 7) Not only can you embed audio, but you can also embed video directly into your PDF document. Check out this example - (Just click the image below to see fireworks.)

The Powerful PDF

So, whether you need a simple document, an in-depth report or a great presentation, you can't go wrong with a custom PDF.
